

# POST AND RAIL BARRIER SYSTEM

## POST & RAIL BARRIERS

Forklifts, cars, trucks and pedestrians do not mix in a busy industrial environment. Our Defender post and rail barrier systems are designed to provide protection for pedestrians and damage to property. Clearly designated pathways and warning signs are a must, but for areas where total protection is required, the Defender barrier system is the ideal solution. The system is easily customised to suit your needs. It's modular design allows for easy replacement of components in the event of damage. It is easily assembled and economical to transport. An extra addition to the system is a pallet safety angle which prevents pallets from protruding into the walkway.

- Available with a variety of rail lengths - 2, 3, 4, 6 metres
- Easy to assemble, bolt down or in-ground installation
- Highly visible yellow finish as standard
- Easy to transport and install
- Installation service available in major metro areas
- Can be customised to suit your needs
- Call for more information 1300 76 44 77

Code	Style
